AutogenAI

AutogenAI's Commitment to Trust

Trust and Transparency

Businesses around the globe rely on AutogenAI to create winning proposals, increase the quantity and quality of bids, and gain a competitive edge for their most sensitive and time-critical content generation. AutogenAI maintains the secure environments they've come to trust.

To meet our clients' specific needs, we offer three options for hosting:

1. **Secure Cloud Service:** Administrated by vetted and approved AutogenAI admins with full audit logging. This offers a range of choices to meet varying client security requirements.
2. **Third-Party Cloud Environment:** An escrow service, the provider's own cloud, or hosting on an alternative infrastructure provider, such as AWS.
3. **On-Prem:** A containerized solution, running in a client's local network and physical hardware.

Compliance and Data Security

Trust is at the core of our business and embedded in everything we do. AutogenAI has an established Information Security Program that covers our global business operations. This is regularly reviewed, tested, and audited by independent third parties.
